

Swimming Pool Heater Care

1. **ALWAYS** turn heater off at least **20 minutes** prior to shutting down pool pump to prevent heat damage to pvc plumbing.
2. **ALWAYS** maintain proper chemistry in pool especially pH levels. The pH levels should be between 7.2 and 7.8. Levels below this **WILL** corrode the heater core causing damage costing upwards of \$1500.00.
3. **ALWAYS** make sure pool pump is on before trying to turn on heater. Heater **WILL NOT** run if pool pump is not turned on.
